NOTE

Do not connect the UA-M10 to your computer until you have finished installing the driver.
If you have already connected the UA-M10, disconnect it, and then re-connect it after driver installation is completed.

Panel Descriptions

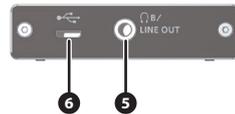

Top panel

Side panel (right)

Side panel (left)

1 USB indicator	This is lit when the UA-M10 is operating. This blinks slowly when DSD data is playing.
2 Level/Volume indicator	Indicates the USB 1/2 playback level. When you press a volume [-] [+] button, this temporarily indicates the current volume setting.
3 Volume [-] [+] buttons	Use the [-] [+] buttons to adjust the USB 1/2 volume. The specified volume setting is remembered. If you want to temporarily mute, press both buttons at the same time.
4 Ⓜ (Headphone) A jack	Connect headphones here. With the factory settings, the same sound (USB 1/2) is output at the same volume from both Ⓜ (Headphone) A and B jacks.
5 Ⓜ (Headphone) B/LINE OUT jack	The sound that's output from the Ⓜ (Headphone) B/LINE OUT jack can be changed (USB 1/2 or USB 3/4) by a driver setting. * To prevent malfunction and equipment failure, always turn down the volume, and turn off all the units before making any connections.
6 Ⓜ (USB) port (Micro USB B port)	Connect this to a computer that supports USB 2.0. Before connecting the UA-M10 for the first time, you must install the driver as described in "Install the Driver."

Turning the Power On

Once everything is properly connected, be sure to follow the procedure below to turn on their power. If you turn on equipment in the wrong order, you risk causing malfunction or equipment failure.

1. Use a USB cable to connect the UA-M10 to your computer.

The UA-M10's power turns on.

* This unit is equipped with a protection circuit. A brief interval (a few seconds) after turning the unit on is required before it will operate normally.

2. Turn on the power of the device that's connected to the Ⓜ (Headphone) B/LINE OUT jack, and adjust the volume.

* You might hear some sound when switching the unit on/off. However, this is normal and does not indicate a malfunction.

Driver Setting Panel

You can switch the OUTPUT MODE or turn S1LKi Mode (*1) on/off by using the UA-M10 driver setting panel installed in your computer.

The driver setting panel will be available for use after you've installed the dedicated driver.

Starting Up the Driver Setting Panel

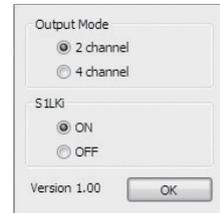

Access the UA-M10 driver setting panel as follows.

Windows

Open the "Control Panel," double-click the [UA-M10] icon, and then click the device settings button.

Mac OS X

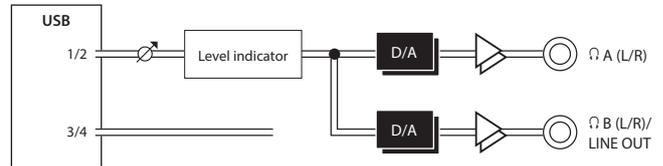

Open the system preferences, click the [UA-M10] icon, and then click the device settings button.

Output Mode

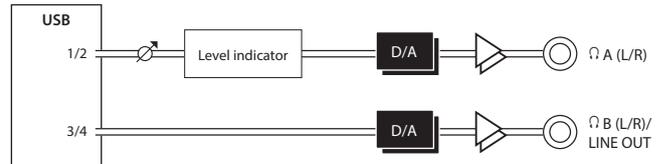

2 channel

With the factory settings, the same sound is output at the same volume from both the Ⓜ (Headphone) A jack and the Ⓜ (Headphone) B/LINE OUT jack.

4 channel (direct output)

Choose this setting if you want to listen to headphones while sending a different signal via line out.

NOTE

With the four-channel (direct output) setting, the volume adjustment does not apply to the Ⓜ B (L/R)/LINE OUT jack; it will always output at the maximum volume. If headphones are connected, the high volume can damage your hearing. If the volume of a connected device is raised, the high volume can also damage your device. Be sure that the Ⓜ B (L/R)/LINE OUT jack is connected to a device that allows the volume to be adjusted, and take care not to let the output volume be excessive. If you play back DSD data with the four-channel (direct output) setting, the Ⓜ B (L/R)/LINE OUT jack will have no sound.

S1LKi Mode (*1)

Turns S1LKi Mode on/off.

MEMO

Turn S1LKi mode off in the following cases.

- If the level meter of the connection-destination moves even during times of silence.
- If precise reproduction of the phase is the priority

*1 What is S1LKi?

This is Roland's new audio output engine that allows the 32-bit PCM signal output from a PC application to be expressed to its full potential, more dynamically and with better detail.

Playing Back DSD Audio Data

This unit can play back DSD data of 2.8 MHz or 5.6 MHz sampling rates using the DoP standard.

1. Turn S1LKi mode on for the UA-M10.

2. Start a playback application that supports DSD, and set it to play back using the DoP standard.

* When playing DSD data of 2.8 MHz or 5.6 MHz, the SAMPLE RATE in the driver settings panel indicates 176400 Hz or 352800 Hz respectively.

* 5.6 MHz DSD data is down-converted to 2.8 MHz for playback.
