

Genesis® Series GS-200

Genesis® Series guitar stands from Ultimate Support deliver innovative features and performance in a road ready package. Each model offers our patented leg-locking system for stability. The protective padding on the legs is designed to prevent damage to the finish on your guitar. Whether you're looking for a quality stand for your acoustic, electric, bass guitar, or even your favorite combo amp; there's a Genesis Series stand for you!

Safety Strap

This stand features a safety strap that folds out of the way when not in use. When in use, safety strap folds over guitar and secures it.

Pick Holder

The GS-100, GS-200 and GS-55 have slots to hold guitar picks. The GS-200 can hold up to 4 picks.

Height-Adjustable

Easily adjust the height of your stand to fit electric, acoustic or electric base guitars.

Leg Locking System

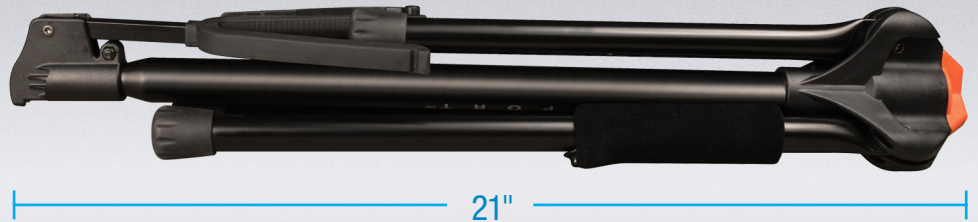

Ultimate's patented leg locking system allows for easy fold up and storability. Locks in both folded and unfolded positions.

Protective Padding on Support Arms

Protective padding that won't harm your guitar's finish and arms that add additional support for acoustic guitars. (A high quality case is recommended for long-term storage).

3.5"

21"

Portable

One of the most noticed features of the Genesis Series Guitar stands is their compact design, which allows for efficient storage and transport. This is possible because the legs fold up, not down, and lock in place.
