

# TELEPORT GLT/GLR

EN

High-Performance Active Guitar Signal Transmitter/  
Receiver for Long Cable Run Systems

## Connection

## Getting Started

1. Connect the included power adaptor to the GLT power socket.
2. Connect your guitar to the GLT ¼" input via standard instrument cable.
3. Connect a balanced XLR cable from the GLT output to the GLR input.
4. With the amplifier turned off or in standby mode, connect a standard instrument cable from the GLR output to your amp's input.
5. Power on your amplifier.
6. Move the ground switch on the GLR to the LIFT position if grounding noise is audible.
7. Adjust the DRAG control to simulate the loading that occurs when you connect directly into an amp at close distance. More drag will simulate a longer cable.
